

Introducing Firewall Filtration™

The Power of POE Filtration

Municipal water distribution systems are aging. In fact, by the time it makes it to your building, water can be contaminated with dirt, rust, lead, biofilm, bacteria, viruses, parasites and oxidized metals like iron.

Put a firewall between your water supply and your valuable building with Triple Clear's Firewall Filtration System. This state-of-the-art solution prevents potentially damaging contaminants from entering your building, where they can clog your mechanical system, dilute equipment efficiency, and worst of all, make people sick.

Look at all the ways your building is impacted by the quality of your water supply

- KEY:**
- Potable water
 - HVAC water
 - Closed loop HVAC
 - Occupant satisfaction; Clean, clear drinking water
 - Reduce maintenance; Reduce breakdowns; Reduce downtime
 - Prevents contaminated water from entering your building
 - Maintain peak efficiency; Reduce scale and grit; Reduce bio scale
 - Reduce biohazard risks; Reduce liability/publicity risks
 - Reduce greenhouse gas emissions; Environmental stewardship
 - Reduce costs
